## PROFILE

I build AI systems that turn complicated workflows into clear, useful tools. My background combines hands-on engineering with founder, product and operations experience. I am strongest when I can go from a messy problem to a working product, test where it fails, and improve it with real users.

## BEST FIT

AI Engineer  
Applied AI  
AI Operations  
Product-oriented Engineering

## 01 · SELECTED WORK

# Useful first. Technical depth one click away.

### LIVE RESEARCH TOOL

## GitLaw

**Find and inspect relevant German federal law with traceable sources.**

Built end to end across 5,936 federal laws: hybrid search, citation graph, API/MCP tools and a public interface.

*Strongest today for source lookup and research support; broader lawyer task-success validation is still pending.*

Demo · GitHub

### WORKING CLOSED BETA

## SafeVoice

**Turn online-harassment evidence into a structured, reviewable case package.**

Text/screenshot intake, classification, evidence hashing, court-prep PDF and human review. A curated 35-case eval currently passes 30/35 across all dimensions.

*Important classifier failures are documented; no broad victim pilot yet.*

Demo · GitHub

### ENGINEERING PROTOTYPE

## Digital Worker Factory

**A reusable pattern for AI workers that must prove their work before acting.**

Evidence contracts, policy gates, approval boundaries, audit and replay across several worker types.

*Public scenarios and the current reliability suite are synthetic; this is not yet production automation.*

GitHub

### GOVTECH DEMO

## PrüfPilot

**Review documents against versioned rules and show what is missing before a human decision.**

Working PDF intake/extraction core plus a guided three-case reviewer demo and API.

*Demo cases are synthetic and the system is not deployed in a public authority.*

## 02 · TOOLKIT

# What I use to ship.

### APPLIED AI

LLM apps · RAG · agents · MCP · structured outputs · evaluation · human-in-the-loop

### ENGINEERING

Python · FastAPI · REST APIs · SQL/PostgreSQL · TypeScript · React · Git/CI

### PRODUCT & OPS

Problem framing · rapid prototyping · workflow design · user research · process improvement

# Operator experience before AI.

|                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                     |

**THE NEXT PROOF**

Next I want to bring this builder velocity into a strong team and add the evidence that matters most: real users, real corrections and measurable outcomes.
